

In response to recent concerns about satellite radio and petitions against it I would like to say "I support satellite radio." It is the technology we have needed for decades. With commuters traveling hundreds of miles round trip having access to traffic and weather is essential. This is a paid service and it should not be limited.

I Urge the FCC to reject NAB's petition 04-160, I support XM and the other satellite providers. This is a service that only satellite can provide, regular broadcasting can not commit.

Thank you for your time,
Teresa Shuffield
